

Type: Change Request
Reference: 1550
Version No: 1.0
Subject: Maternity Services Data Set Version 2
Effective Date: 1 April 2019
Reason for Change: Change to Data Standards
Publication Date: 13 September 2018

Background:

The Maternity Services Data Set Version 1 was approved by the Information Standards Board for Health and Social Care (ISB) as [ISB 1513 Amd 45/2012](#).

A number of changes have been identified since the last version, and the Maternity Services Data Set Version 2 includes:

- A new structure and content, including clinical terminology, to meet current clinical practice and incorporate new requirements. It brings the Maternity Services Data Set into line with the core structures of the Community Services Data Set (CSDS) and the Mental Health Services Data Set (MHSDS).
- The Maternity Services Data Set will be submitted centrally via the Data Services Platform (DSP) maintained by NHS Digital. This replaces the Bureau Service Portal (BSP) that was previously used.
- Amendments to National Code values and descriptions
- New Data Items
- Retirement of Data Items
- Retirement of the Mothers Sexual Health And Infectious Diseases Data Set as the anonymised data is now included in the Anonymous Self-Assessment Table
- Changes to Organisation and Organisation Site Code Data Items to reflect changes to organisation reference data maintained and published by the Organisation Data Service, as defined by [SCCI0090: Health and Social Care Organisation Reference Data](#).

To support the Information Standard, this Change Request updates the NHS Data Model and Dictionary to introduce the Maternity Services Data Set Version 2.

[Maternity Services Data Set Overview](#)

For a "Full Screen" view, click [Maternity Services Data Set](#).

In the "Full Screen" view, to return to the "Data Set" view, click the browser "back" button.

The Mandatory, Required or Optional (M/R/O) column indicates the recommendation for the inclusion of data:

- M = Mandatory: this data element is mandatory and the technical process (e.g. submission of the data set, production of output etc) cannot be completed without this data element being present
- R = Required: NHS business processes cannot be delivered without this data element
- O = Optional: the inclusion of this data element is optional as required for local purposes.

For guidance on downloading the XML Schema, see [XML Schema TRUD Download](#).

MATERNITY SERVICES DATA SET OVERVIEW

Change to Supporting Information: Changed Description

Contextual Overview

The Maternity and Children's Data Sets have been developed as a key driver to achieving better outcomes of care for mothers, babies and children. The [Maternity Services Data Set \(MSDS\)](#) is a PATIENT-level data set that captures key information at each stage of the maternity care pathway including mother's demographics, [Antenatal Booking Appointments](#), admissions and re-admissions, [Screening Tests](#), [Labour and Delivery](#) along with baby's demographics, admissions, diagnoses and [Screening Tests](#).

The [Maternity Services Data Set](#) provides comparative, mother and child-centric data that includes information on incidence and care that can be used to improve clinical quality and service efficiency; and to commission services in a way that improves health and reduces inequalities. As a secondary uses data set the Maternity Services Data Set re-uses clinical and operational data for purposes other than direct PATIENT care. It defines the data items, definitions and associated value sets extracted or derived from local information systems.

The [Maternity Services Data Set](#) contains two data sets for: The [Maternity Services Data Set](#) is designed to meet requirements that resulted from the National Maternity Review, which led to the publication of the [Better Births](#) report in February 2016. [Better Births](#) highlighted the need for [Maternity Services](#) in England to become safer, more personalised and provide better access to information for pregnant women. The publication of [Better Births](#) resulted in the establishment of the [Maternity Transformation Programme](#), and the data set forms part of the 'Sharing Data and Information' workstream of the programme.

- [Maternity Services Data Set](#) (also known as the [Maternity Services Secondary Uses Data Set](#)) where the information is identifiable
- [Mothers Sexual Health and Infectious Diseases Data Set](#) where the information is anonymised.

The [Maternity Services Data Set](#): Data Collection

- allows maternal and child health data to be linked so that vital information can be used to improve services
- addresses health inequalities
- provides comparative data (demographics, equalities, interventions and outcomes from pregnancy through childhood) so that health visiting services can be directed to areas with most need
- improves accountability, making it easier for the public to access comparative information to support them in making decisions about type and place of care
- records outcomes to contribute to clinical risk management and governance to reduce litigation costs
- supports the development of maternity networks and changes to the maternity tariff to drive the extension of women's choices of maternity care, and
- underpins the improvement of local information systems to meet data set standards
- supports the Maternity Currencies.

Data Collection The [Maternity Services Data Set](#) collects information on each stage of care for women as they go through pregnancy.

The [Maternity Services Data Set](#) provides the definitions for data. The [Maternity Services Data Set Information Standards Notice \(ISN\)](#) mandates the central flow of administrative and clinical information for secondary uses purposes. The scope of the data set includes all ACTIVITY carried out by NHS-funded [Maternity Services](#) relating to the mother and baby or babies, from the point of the first [Antenatal Booking Appointment](#) until the mother and baby are discharged from [Maternity Services](#).

The [Maternity Services Data Set](#) provides the definitions for data:

- to be lodged in the data warehouse regularly and routinely e.g. monthly. Extracts for [Hospital Episode Statistics \(HES\)](#) and other reports will be taken at prearranged intervals for publication as currently with the process for Commissioning Data Sets;
- to be assembled, compiled and to flow into a secondary uses data warehouse;
- to provide timely, pseudonymised PATIENT-based data and information for purposes other than direct clinical care, e.g. planning, commissioning, public health, clinical audit, performance improvement, research, clinical governance.
- to be lodged in the central data warehouse regularly and routinely e.g. monthly. Extracts will be taken at prearranged intervals for publication
- to be assembled, compiled and to flow into a secondary uses data warehouse
