

# NHS Data Model and Dictionary

**Type:** Change Request  
**Reference:** 1630  
**Version No:** 1.0  
**Subject:** National Joint Registry Data Set Version 7  
**Effective Date:** 4 June 2018  
**Reason for Change:** Change to Information Standards  
**Publication Date:** 5 June 2018

## Background:

The National Joint Registry Data Set Version 6 was approved by the Information Standards Board for Health and Social Care (ISB) as [ISB 1567 Amd 15/2014](#).

A number of changes have been identified since the last version and the National Joint Registry Data Set Version 7 is being introduced.

To support the new Information Standard, this Change Request updates the NHS Data Model and Dictionary to:

- Create new Data Items
- Make amendments to National Code values and descriptions
- Replace the existing NHS Data Model and Dictionary codes with the National Joint Registry bulk upload codes / system generated codes. As a result, some items have been renamed to make it clear that they relate to the National Joint registry Data Set only.
- Retire the Attributes and Data Elements that are no longer included in the data set
- Make changes to Organisation and Organisation Site Code Data Items to reflect changes to organisation reference data maintained and published by the Organisation Data Service, as defined by [SCCI0090: Health and Social Care Organisation Reference Data](#).

#### NATIONAL JOINT REGISTRY DATA SET OVERVIEW

---

Change to Supporting Information: Changed Description, Dataset

#### Background:

The [National Joint Registry Data Set](#) collects information on primary [Joint Replacement Surgery](#) and revision [Joint Replacement Surgery](#).

The majority of [National Joint Registry Data Set](#) items relate to the [PATIENT](#)'s operation details and are collected in the [OPERATING THEATRE](#).

The National Codes for National Joint Registry items match the [National Joint Registry](#) bulk upload codes / system generated codes.

[PATIENTS](#) must give their consent for this data to be recorded on the [National Joint Registry](#) Data Entry System (the electronic system for collection and transfer of data).

*Note: the consent is for data in the 'Patient Identifiers' group. Where consent is not given, the 'Patient Details' group and the operation details are still recorded.*

#### Operations included in the National Joint Registry database:

- [Primary Ankle Replacement Surgery](#)
- [Revision Ankle Replacement Surgery](#)
- [Primary Elbow Replacement Surgery](#)
- [Revision Elbow Replacement Surgery](#)
- [Primary Hip Replacement Surgery](#)
- [Revision Hip Replacement Surgery](#)
- [Primary Knee Replacement Surgery](#)

**CONSULTANT CODE**

Change to Attribute: Changed Dataset

A code uniquely identifying a [CONSULTANT](#).

The [CONSULTANT CODE](#) is derived from either the [GENERAL MEDICAL COUNCIL REFERENCE NUMBER](#) for [GENERAL MEDICAL PRACTITIONERS](#), or the [GENERAL DENTAL COUNCIL REGISTRATION NUMBER](#) for [GENERAL DENTAL PRACTITIONERS](#) (where the dentist doesn't have a [GENERAL MEDICAL COUNCIL REFERENCE NUMBER](#)).

For [GENERAL MEDICAL PRACTITIONERS](#) working as [CONSULTANTS](#), the [GENERAL MEDICAL PRACTITIONER's GENERAL MEDICAL COUNCIL REFERENCE NUMBER](#) should be used, see data item note for [GENERAL MEDICAL PRACTITIONER \(SPECIFIED\)](#).

For [GENERAL DENTAL PRACTITIONERS](#) working as a:

- Hospital [CONSULTANT](#), the [GENERAL MEDICAL COUNCIL REFERENCE NUMBER](#) should be used, prefixed with "C"
- Dental [CONSULTANT](#):
  - Who does not have a [GENERAL MEDICAL COUNCIL REFERENCE NUMBER](#), the [GENERAL DENTAL COUNCIL REGISTRATION NUMBER](#) should be used, prefixed with "CD".
  - Where the [GENERAL MEDICAL COUNCIL REFERENCE NUMBER](#) or [GENERAL DENTAL COUNCIL REGISTRATION NUMBER](#) is not known, the default code should be used, see [CONSULTANT CODE](#) or [Organisation Data Service Default Codes](#).

*Note: There are some overseas-qualified dentists who are not fully registered with the [General Dental Council](#) but enjoy what is called "Temporary Registration". These dentists are not currently in the scope of the Dental Consultant codes file published by the [Organisation Data Service](#) and will not be included.*

**Consultant Code format**

Practitioner Code Type	Character Position								Allocated By	Allocated To	Known As	Notes
	1	2	3	4	5	6	7	8				
Hospital Consultant	C	0-9	0-9	0-9	0-9	0-9	0-9	0-9	<a href="#">NHS Digital</a>	Hospital Consultants in England and Wales	Consultant Code	Derived from <a href="#">GENERAL MEDICAL COUNCIL REFERENCE NUMBER</a> , prefixed with a C
Dental Consultant	C	D	0-9	0-9	0-9	0-9	0-9	0-9	<a href="#">NHS Digital</a>	Dental Consultants in England and Wales	Dental Consultant Code	Derived from <a href="#">GENERAL DENTAL COUNCIL REGISTRATION NUMBER</a> , prefixed with CD. Note that <a href="#">GENERAL DENTAL COUNCIL REGISTRATION NUMBERS</a> vary in length. Filling zeros are used between the prefix and <a href="#">GENERAL DENTAL COUNCIL REGISTRATION NUMBER</a> , where required, to maintain total length of 8 characters.  For further information, please refer to the <a href="#">Dental Consultants in England (PDF)</a> guidance document issued by the <a href="#">Organisation Data Service</a> .

For NHS [PATIENTS](#) treated overseas, the commissioner of the overseas treatment is responsible for assuring that the overseas doctor is provided with a [GENERAL MEDICAL COUNCIL REFERENCE NUMBER](#). In the case of overseas doctors, the default code C9999998 should only be used where no [GENERAL MEDICAL COUNCIL REFERENCE NUMBER](#) has been assigned.

All [Midwife Episodes](#) are identified in the Admitted Patient Care Commissioning Data Set (CDS) and [Hospital Episode Statistics](#) by a pseudo [MAIN SPECIALTY CODE](#), 560, see [Main Specialty and Treatment Function Codes Table](#). A default code is used in the [CONSULTANT CODE](#) field to show that a [MIDWIFE](#) is the responsible professional. Note that the [MIDWIFE's](#) own code is not used.

All [Nursing Episodes](#) are identified in the Admitted Patient Commissioning Data Set and [Hospital Episode Statistics](#) by a pseudo [MAIN SPECIALTY CODE](#), 950, see [Main Specialty and Treatment Function Codes Table](#). A default code is used in the [CONSULTANT CODE](#) field to show that a [NURSE](#) is the responsible professional. Note that the [NURSE](#)'s own [Nursing and Midwifery Council](#) code is not used.

**NHS NUMBER**

Change to Attribute: Changed Dataset

The [NHS NUMBER](#), the primary identifier of a [PERSON](#), is a unique identifier for a [PATIENT](#) within the NHS in England and Wales.

This will not vary by any [Organisation](#) of which a [PERSON](#) is a [PATIENT](#).

It is mandatory to record the [NHS NUMBER](#). There are exceptions, such as Accident and Emergency care, sexual health and major incidents, as defined in existing national policies.

The [NHS NUMBER](#) is 10 numeric digits in length. The tenth digit is a check digit used to confirm its validity. The check digit is validated using the Modulus 11 algorithm and the use of this algorithm is mandatory. There are 5 steps in the validation of the check digit:

**Step 1** Multiply each of the first nine digits by a weighting factor as follows:

**Digit Position**

(starting from the left) Factor:

1	10
2	9
3	8
4	7
5	6
6	5
7	4
8	3
9	2

**Step 2** Add the results of each multiplication together.

**Step 3** Divide the total by 11 and establish the remainder.

**Step 4** Subtract the remainder from 11 to give the check digit.

If the result is 11 then a check digit of 0 is used. If the result is 10 then the [NHS NUMBER](#) is invalid and not used.

**Step 5** Check the remainder matches the check digit. If it does not, the [NHS NUMBER](#) is invalid.

Further guidance is available from the [NHS Digital](#) website at: [NHS Number](#).

Note:

This was [e-GIF](#) approved for use in NHS England.

[e-GIF](#) and the [Government Data Standards Catalogue](#) have been archived and are available for reference only.

Note: Codes for Executive Agency, Executive Agency Programme, Executive Agency Site and Executive Agency Programme Department do not easily fit into the coding frames as shown above and are therefore not included. This is due to their unusual structure in that there are more hierarchical 'tiers' than with other organisations.

Executive Agency and Executive Agency Programme are both considered Organisation level entities, although each Programme does have a relationship to an Executive Agency. Executive Agency codes are three characters long. Executive Agency Programme codes are six, and their first three characters are the same as the Executive Agency they are associated to.

Department codes of eight characters long can then be allocated underneath a Programme code (sharing the first six characters). Executive Agency Site codes of five characters long can be allocated under an Executive Agency code (and share the first three characters).

Note: A-9 indicates that characters A-Z and 0-9 are valid: except B, I, O, S, U and Z (to avoid ambiguity). This applies to all [ORGANISATION SITE CODES](#) in the Coding Format Table above except [Independent Sector Healthcare Provider \(ISHP\)](#) sites.

**Notes:**

[ORGANISATION SITE IDENTIFIER \(OF TREATMENT\)](#) is the same as attribute [ORGANISATION IDENTIFIER](#).

[ORGANISATION SITE IDENTIFIER \(OF TREATMENT\)](#) is the [ORGANISATION IDENTIFIER](#) of the [Organisation Site](#) where the [PATIENT](#) was treated, i.e. it should enable the treating [Organisation](#) to be identified.

[ORGANISATION SITE IDENTIFIER \(OF TREATMENT\)](#) identifies the [Organisation Site](#) within the [Organisation](#) on which the [PATIENT](#) was treated, since facilities may vary on different hospital sites.

The code recorded should always be the national code; if the treatment is sub-commissioned to another NHS [Health Care Provider](#) or an independent UK provider, the [ORGANISATION SITE IDENTIFIER \(OF TREATMENT\)](#) used should be the [ORGANISATION IDENTIFIER](#) of the [Health Care Provider](#) actually carrying out the work.

Where treatment is sub-commissioned to an overseas provider the [Organisation Data Service Default Code](#) 89997 'Non-UK Provider where no [ORGANISATION IDENTIFIER](#) has been issued' is applicable.

Each [Organisation](#) has a unique [ORGANISATION IDENTIFIER](#). However, where an [Organisation](#) has more than one site from which it provides [SERVICES](#), then each site is uniquely identified. These sites are [Organisation Sites](#) and are uniquely identified by an [ORGANISATION IDENTIFIER](#).

For out-patients, [ACTIVITY](#) may take place outside the hospital, such as in the [PATIENT'S](#) home; in such cases, raising a site code is impractical. Therefore, code R9998 'Not a hospital site' would be used in these circumstances.

Note: [LOCATION CLASS](#) is used in the Commissioning Data Set (CDS) message to indicate the classification of the physical [LOCATION](#) within which the [ACTIVITY](#) occurred.

**Use in the Future Outpatient CDS:**

If the [INTENDED SITE CODE \(OF TREATMENT\)](#) is not known, this data element should be omitted.

[SITE CODE \(OF TREATMENT\)](#) will be replaced with [ORGANISATION SITE IDENTIFIER \(OF TREATMENT\)](#), when it has been approved for use in national information standards.

**SITE CODE (OF TREATMENT)**

Change to Data Element: Changed Dataset

Format/Length:	min an5 max an9
National Codes:	

<b>ODS Default Codes:</b>	R9998 - Not a hospital site
	89999 - Non-NHS UK Provider where no <a href="#">ORGANISATION SITE CODE</a> has been issued
	89997 - Non-UK Provider where no <a href="#">ORGANISATION SITE CODE</a> has been issued

**Notes:**

[SITE CODE \(OF TREATMENT\)](#) is the same as attribute [ORGANISATION SITE CODE](#).

[SITE CODE \(OF TREATMENT\)](#) is the [ORGANISATION SITE CODE](#) of the [Organisation](#) where the [PATIENT](#) was treated, i.e. it should enable the treating [Organisation](#) to be identified.

This identifies the [Organisation Site](#) within the [Organisation](#) on which the [PATIENT](#) was treated, since facilities may vary on different hospital sites.

The code recorded should always be the national code; if the treatment is sub-commissioned to another NHS [Health Care Provider](#) or an independent UK provider, the [SITE CODE \(OF TREATMENT\)](#) used should be the [ORGANISATION SITE CODE](#) of the [Health Care Provider](#) actually carrying out the work.

Where treatment is sub-commissioned to an overseas provider the [Organisation Data Service Default Code](#) 89997 'Non-UK Provider where no [ORGANISATION SITE CODE](#) has been issued' is applicable.

Each [Organisation](#) has a unique [ORGANISATION CODE](#). However, where an [Organisation](#) has more than one site from which it provides [SERVICES](#), then each site is uniquely identified. These sites are [Organisation Sites](#) and are uniquely identified by [ORGANISATION SITE CODE](#). The [ORGANISATION SITE CODE](#) contains the first 3 digits of the [ORGANISATION CODE](#) with the last two digits being the site identifier.

Example:

- RA700 [ORGANISATION CODE](#) of the [Organisation](#)
- RA701 [ORGANISATION SITE CODE](#) of the first identified [Organisation Site](#) within the [Organisation](#)
- RA702 [ORGANISATION SITE CODE](#) of the second identified [Organisation Site](#) within the [Organisation](#)

For out-patients, [ACTIVITY](#) may take place outside the hospital, such as in the [PATIENT](#)'S home; in such cases, raising a site code is impractical. Therefore, code R9998 'Not a hospital site' would be used in these circumstances.

*Note: [LOCATION CLASS](#) is used in the Commissioning Data Set (CDS) message to indicate the classification of the physical [LOCATION](#) within which the [ACTIVITY](#) occurred.*

**Use in the Future Outpatient CDS:**

If the [INTENDED SITE CODE \(OF TREATMENT\)](#) is not known, this data element should be omitted.

**[SITE CODE \(OF TREATMENT\)](#) will be replaced with [ORGANISATION SITE IDENTIFIER \(OF TREATMENT\)](#), when it has been approved for use in national information standards.**
